Certes announces on-going partnership with EU Commission

CERTES ANNOUNCES ON-GOING PARTNERSHIP WITH EU COMMISSION

Certes Networks announces it has been selected by the EU Commission as a trusted cybersecurity technology provider

20 April, Pittsburgh MA, Certes Networks, an innovator in software-defined security solutions, today announces its work as an on-going provider of cybersecurity solutions to secure data-in-motion for the EU commission.

Handling sensitive data from its 28 member states, the EU Commission has selected Certes Networks as part of an official procurement framework, based on its proven ability to encrypt and protect data in motion. This extends the relationship between Certes Networks and the European Commission, who have been working together since 2012.

The European Commission is the EU's politically independent executive arm and is responsible for all new European legislation proposals, and the implementation of decisions of the European Parliament and the Council of the EU.

Paul German, President and CEO at Certes Networks commented, "We are very proud to continue our on-going relationship with the European Commission based on our proven ability to protect sensitive data-in-motion. With the introduction of GDPR, and based on the success over the last 5 years, we are delighted to be able to continue to protect the data of the EU citizens through our work with the European Commission, but also assisting organisations looking for innovative security solutions to help meet the new regulatory demands."

About Certes Networks

Certes Networks is revolutionizing encryption management. While competitors offer encryption methods that are often disruptive and complex, the [Certes Layer 4 solution](#) enables encryption of data in transit independent of applications and without having to move, replace or disrupt the network infrastructure.

The [Certes Layer 4 solution](#) encrypts data in transit and allows for secure masked encryption of only the payload, and not the entire network packet. By applying the Certes Layer 4 solution, network visibility is maintained providing security for data in transit.
